

## Translation of Technical Information

Para provides full technical information in several forms. You may have received documents called "Scheda Articolo" or "Scheda Technica", and "Solidita".

Here are some translations from the original Italian:

ITALIAN	ENGLISH	COMMENTS
Scheda Aticolo = Scheda Technica	Technical data	In English, Italian, French and German
T.U. = Tinta Unita	Piece dyed	
ST = Stampato	Printed	
Articolo	Range name	
Solidita	Solidity	In this case "fastness"
Colore	Colour	
Tono	Shade description	
Tinta	Type of dyestuff or process	C, I, R, P - see below
C = Candeggiato	Bleached	
I = Indanthrene	Vat dyestuff	
R = Reattivo	Reactive dyestuff	
P = Purgato	Scoured	
SOL. LUCE	Colour fastness to light	
SF. SECCO	Colour fastness to dry rubbing	
SF. UMIDO	Colour fastness to wet rubbing	

Para sets these parameters in harmony with the dyestuff suppliers, using only the highest quality chemicals that are most suitable for natural-fibre fabrics, where alternative formulations (and therefore performances) do not exist.

Please also remember the obvious differences in performance between a natural-fibre fabric and a man-made fibre fabric. Para can only accept a claim from a customer if the fabrics do not conform to Para's stated figures.

### Claims

Incorrect or non-delivery, or split or broken palettes etc. must be notified within 24 hours of receipt of goods. Notification must be in writing, accompanied by photographs where possible. If goods arrive in poor condition, please DO NOT sign for them as approved.

Fabric quality issues must be notified in writing within 7 days of receipt.
